

Extraordinary Rhymes is...

A simple client-side web app for writing and composing song lyrics. It features rhyme highlighting, syllable counting, bar counting, and a drag-n-drop part interface (re; Verse, Chorus, etc.).

Extraordinary Rhymes

By James Yen

Presented on: May 5th, 2017

General UI:

Features:

1. Partition song lyrics into sections.
2. Detect rhymes and highlight rhymes.
3. Annotate bar lines.
4. Save lyrics.

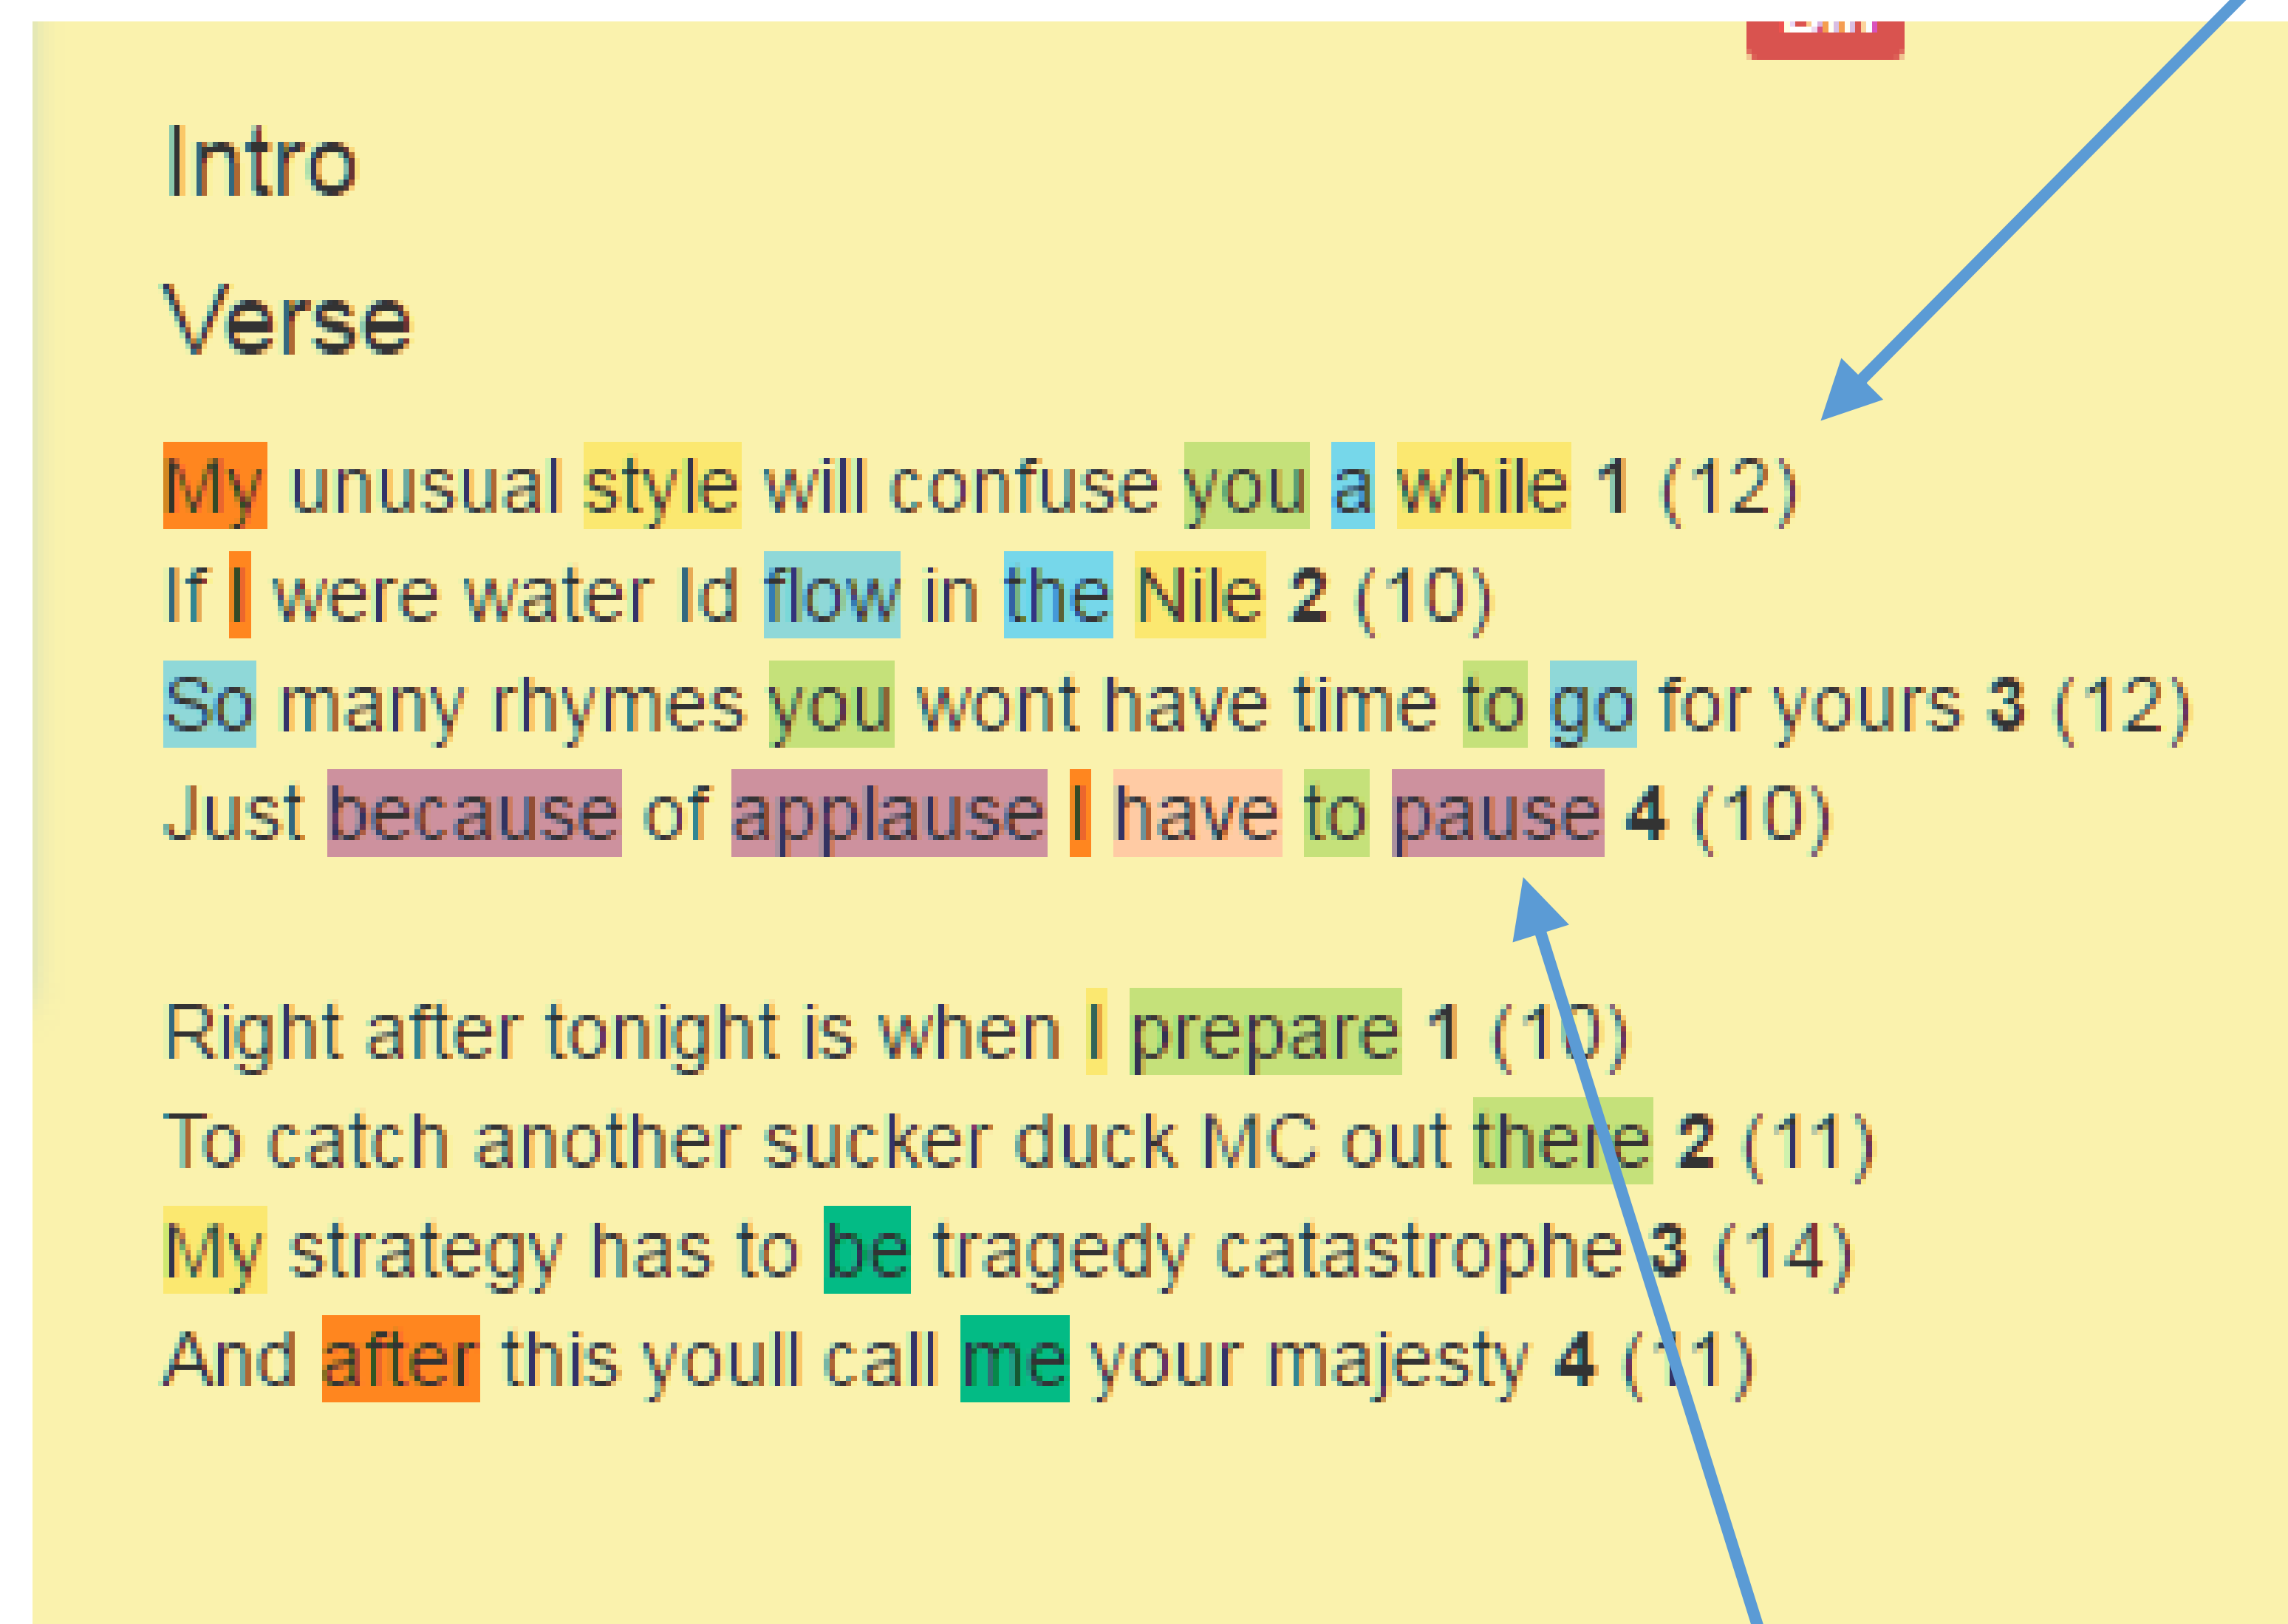

Afterword:

I was never able to incorporate any true AI into the rhyming, and of course, the API used (*Datamuse*) could not completely map all rhymes. This project nevertheless represents my love for music.

Song used in poster:

Eric B. & Rakim – My Melody

Syllable counting,
bar counting.

Rhyme
detection.

Motivation:

Although most lyricists do not use a 'lyric editor', this project seemed like a fun intersection of technology and art.
